

## Mohammad Saeed Koodakpoor

---

### Education

**2017 - 2022** Graduated Student of **B.E. Computer Engineering**, *University of Tehran*, Tehran, Iran.

Department of Computer Engineering

**Major:** Software Engineering

**Related Courses:** Data Structures and Algorithm, Advanced Programming, Engineering Probability and Statistics, Computer Architecture, Operating Systems, Principle of Management, Discrete Mathematics, Foundations of Information Technology, Database Systems, Computer Networks, Design and Analysis of Algorithms and Parallel Programming.

**2013 - 2017** Diploma in **Mathematics and Physics Discipline**, *Imam Hossein High-school*, Tehran, Iran.

### Skills and Qualities

**Programming:** Python (good), C/C++ (good), JavaScript (good), TypeScript (good), C# (good), SQL (good), MATLAB(familiar), and Java (familiar).

**Frontend:** Reactjs (good), React Native (good), Android (familiar), HTML, CSS, and Java Script.

**Backend:** Django (good) and ASP.NET Core (good).

**Hardware Design:** Verilog (good), VHDL (good), Assembly (familiar).

**Web Technologies:** Interested in Java Script, HTML5, CSS3.

**DataBase Systems:** SQL Server, MySQL, PostgreSQL and MongoDB.

Flat 2, Number 4,  
Hemmati Alley, Moallem  
Blvd, Yaftabad, Tehran.

[Saeed.koodakpoor@ut.ac.ir](mailto:Saeed.koodakpoor@ut.ac.ir)

**Server-Side Skills:** Proficient in setting up Django with PostgreSQL, Nginx, and Gunicorn on Ubuntu servers.

**Software Engineering:** Excellent knowledge of object oriented design patterns and design techniques.

**Operating Systems:** Comfortable in Ubuntu Linux and Windows.

**Other:** Creative, self-motivated, and always eager to learn new things.

**Languages:** Persian (Native), English (Fluent).

## Work Experience

### Full-Stack Developer

#### Idea Varzan System (IVS)

*June 2021 – May 2022*

#### Responsibilities:

- Working on a project management web application called IPMP.
- Developed web applications in ASP .Net Core framework in Model View Control (MVC) architecture.
- Designing web pages using HTML, CSS, Java Script (Kendo UI).
- Designed, coded and debugged applications in various software languages.
- Exposed to various stages of Software Development Life Cycle on Client/Server and Web-based Applications.

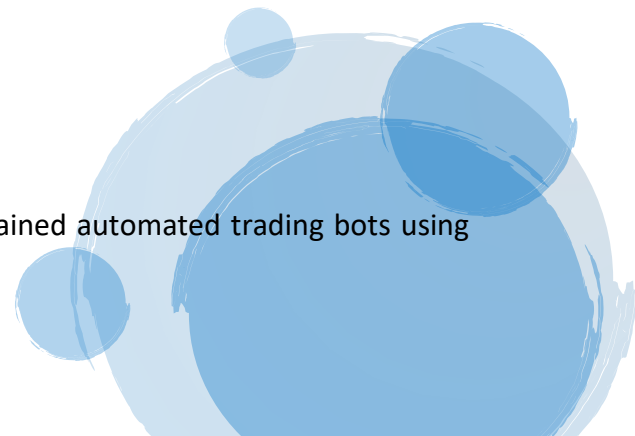

### Python Programmer and Full-Stack Developer

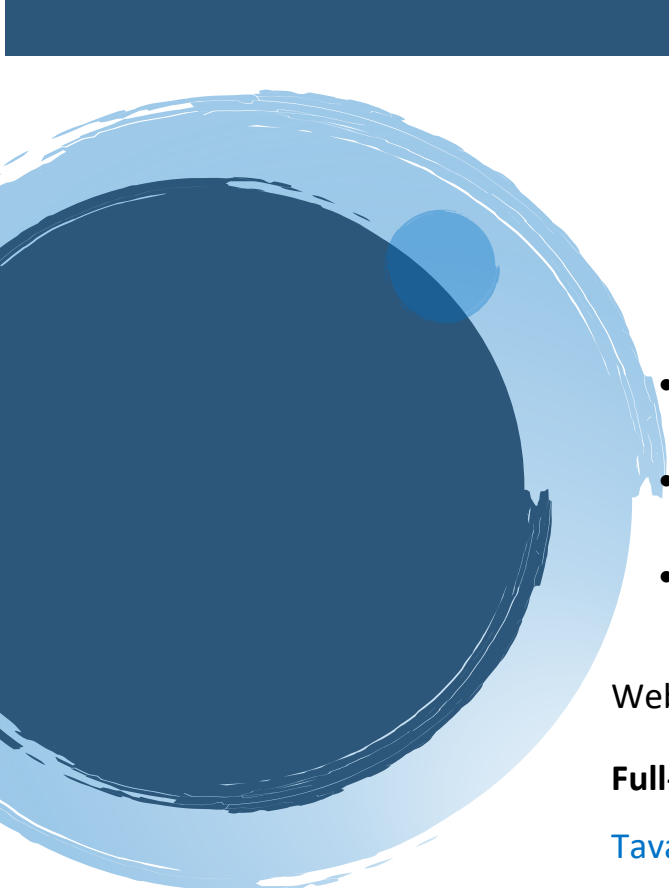

#### EEVA

*August 2023 – Now*

#### Responsibilities:

- Developed and maintained automated trading bots using

Python for cryptocurrency and Forex markets.

- Implemented algorithmic strategies to optimize trading performance and reduce risk.
- Utilized APIs and web scraping techniques to gather market data and execute trades in real-time.
- Analyzed trading performance and optimized algorithms based on backtesting results.

## Full-Stack Developer

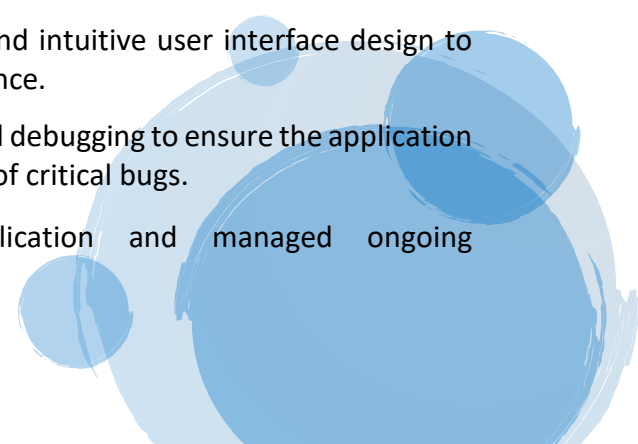

Tavana Startup Team

March 2021 – Now

***Developed a sophisticated application that automates and simplifies the university and major selection process for students participating in the Iranian National Entrance Exam (Konkour). The application leverages a combination of user inputs, algorithmic decision-making, and comprehensive databases of university programs and their entry requirements.***

Website: [Tavana Website](#) and [Tavana Application](#)

### Responsibilities:

- Led full-stack development using Django for the backend and React.js for the frontend.
  - Designed and implemented the database schema to efficiently handle user data and university program information.
  - Developed RESTful APIs for seamless communication between the frontend and backend.
  - Ensured responsive and intuitive user interface design to enhance user experience.
  - Conducted testing and debugging to ensure the application was reliable and free of critical bugs.
  - Deployed the application and managed ongoing
- 

maintenance and updates.

## Full-Stack Developer

MazeTrade Startup Team

January 2022 – Now

***Working on a product called MazeTrade which combines powerful analytics in a fully-customizable online trading journal.***

Website: [MazeTrade Website](#)

### Responsibilities:

- Developing an online trading journal using Django for backend and React JS for frontend.

## Full-Stack Developer

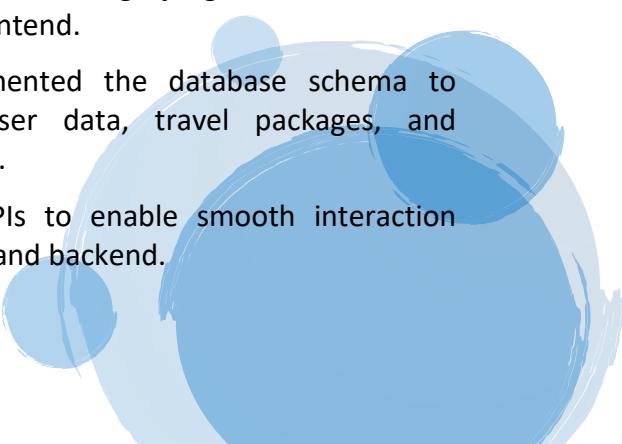

Salamatmand Startup Team

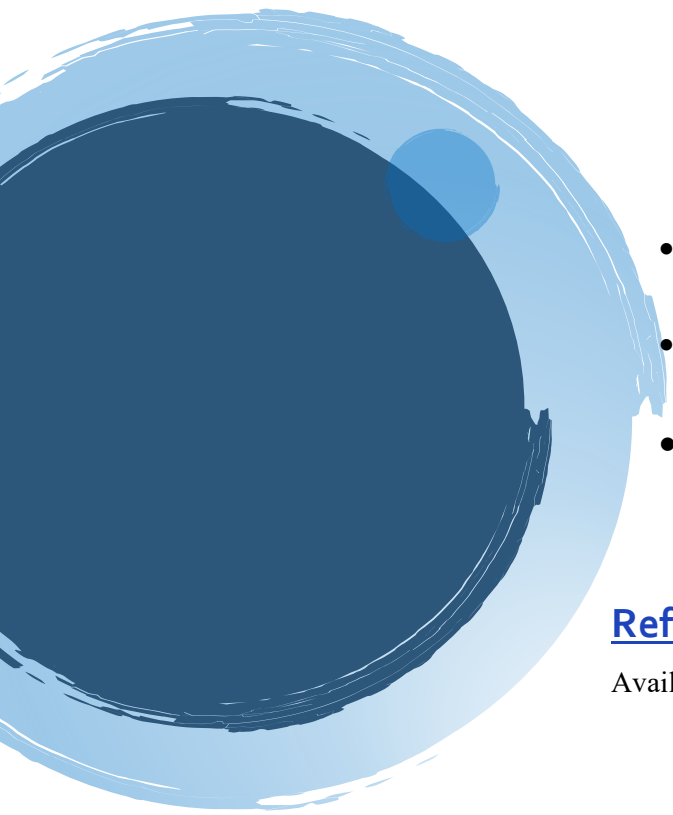

March 2024 – Now

***Developed an innovative application that caters to the tourism needs of senior citizens by providing not only tour planning services but also integrated healthcare support during their travels. This application ensures that elderly travelers can enjoy their trips with peace of mind, knowing that their medical needs are taken care of.***

Website: [Salamatmand Website](#)

### Responsibilities:

- Led full-stack development using Django for the backend and React.js for the frontend.
  - Designed and implemented the database schema to efficiently manage user data, travel packages, and healthcare information.
  - Developed RESTful APIs to enable smooth interaction between the frontend and backend.
- 

- Ensured the application was responsive and accessible, with a focus on usability for senior users.
- Conducted thorough testing and debugging to ensure reliability and ease of use.
- Managed deployment and provided ongoing maintenance and updates to enhance functionality and user experience.
